### **DETAILED ACTION**

Applicant's election of Group I, claims 1-7 (original claims) drawn to compound of formula I wherein Y is CH, namely pyrimidine compounds in the reply filed on 8/9/2007 is acknowledged. Because applicant did not distinctly and specifically point out the supposed errors in the restriction requirement, the election has been treated as an election without traverse (MPEP § 818.03(a)). The amendment to claims 1-5, 7 and cancellation of claim 6, is also acknowledged.

Claims 1-5 and 7 will be examined to the extent they embrace the elected subject matter.

Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).

# Claim Rejections - 35 USC § 112

The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

Claim 4 is rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

Recitation of "at least one compound of formula I according to claim 1" in claim 4 render claim 4 indefinite. As recited at least one implies in addition to compound of

Art Unit: 1624

claim 1, the composition may contain other undisclosed active ingredients.

Replacement of "at least one" by one or more " is suggested.

## Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

The factual inquiries set forth in *Graham* v. *John Deere Co.*, 383 U.S. 1, 148 USPQ 459 (1966), that are applied for establishing a background for determining obviousness under 35 U.S.C. 103(a) are summarized as follows:

- 1. Determining the scope and contents of the prior art.
- 2. Ascertaining the differences between the prior art and the claims at issue.
- 3. Resolving the level of ordinary skill in the pertinent art.
- 4. Considering objective evidence present in the application indicating obviousness or nonobviousness.

This application currently names joint inventors. In considering patentability of the claims under 35 U.S.C. 103(a), the examiner presumes that the subject matter of the various claims was commonly owned at the time any inventions covered therein were made absent any evidence to the contrary. Applicant is advised of the obligation under 37 CFR 1.56 to point out the inventor and invention dates of each claim that was not commonly owned at the time a later invention was made in order for the examiner to consider the applicability of 35 U.S.C. 103(c) and potential 35 U.S.C. 102(e), (f) or (g) prior art under 35 U.S.C. 103(a).

١,

Art Unit: 1624

Claims 1-5 and 7 are rejected under 35 U.S.C. 103(a) as being unpatentable over Gates et al., 5,885,935 in view of Yoshimura et al., US 6,458,748.

Gates et al., teaches several heterocyclic sulfonamides useful as herbicides, which include generically instant compounds, process of making, composition and method of use. See column1, formula I. Note with the given definition of A ring, Y, Q, R<sup>1</sup>, R<sup>2</sup>, R<sup>3</sup> and R<sup>4</sup>, the compounds taught by Gates et al., include generically instant compounds. See column 1- 6 for details of the invention and the process of making. See column 7 through column 12 for examples A1- A127. Especially see column 12, examples A92 and A95 which differ from instant compound in having CF<sub>3</sub> instead of CHF<sub>2</sub> group required by the instant claims. Also see examples A108 and A109 for positional isomers.

Instant claims differ from Gates et al., in requiring a difluoromethylsulfonamide instead of trifluoromethylsulfonamide.

The secondary reference Yoshimura et al., teaches several difluoromethanesulfonamide and trifluoromethanesulfonamide as herbicides. See entire document. Note equivalency of difluoromethanesulfonamide with trifluoromethane sulfonamide is clearly taught by Yoshimura et al. See examples 1, 2, 3 and 4. Especially note example 4, which has the difluoromethanesulfonamide group.

As noted above, the generic definition of Gates include a methoxymethyl group in the phenyl ring (A ring) and Gates explicitly teaches halogen for the said group.

Thus, it would obvious to one trained in the art to make both difluoromethanesulfonamide and trifluoromethanesulfonamide as herbicides bearing

**Art Unit: 1624** 

halogen in the phenyl ring and expect the compounds to have herbicidal activity in view of equivalency teachings outlined above.

Although, specification has unexpected/superior results, the comparison of prior art compound is rather limited and does not include compounds taught in Gates and the secondary reference. Hence, this rejection is deemed as proper.

Note Ex parte Gelles 22 USPQ 2nd 1318, especially the following quote: "The evidence relied upon also should be reasonably commensurate in scope with the subject matter claimed and illustrate the claimed subject matter " as a class" relative to prior art subject matter."

#### Conclusion

Any inquiry concerning this communication from the examiner should be addressed to Venkataraman Balasubramanian (Bala) whose telephone number is (571) 272-0662. The examiner can normally be reached on Monday through Thursday from 8.00 AM to 6.00 PM. The Supervisory Patent Examiner (SPE) of the art unit 1624 is James O. Wilson, whose telephone number is 571-272-0661. The fax phone number for the organization where this application or proceeding is assigned (571) 273-8300. Any inquiry of a general nature or relating to the status of this application or proceeding should be directed to the receptionist whose telephone number is (571) 272-1600.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAG. Status information for unpublished applications is available through Private PAIR only. For
